Implementation Guides and Specifications

The PRS HL7 Messaging Implementation Guide - AB MR2009 is available to organizations using the PRS solution.

The [HL7 Explorer](#) structural specifications for the AB MR2009 HL7v3 messages referenced in this document are available in the for [Alberta R02.04.03 specification](#). This web-friendly documentation is very useful for those familiar with HL7v3 messaging.

Technical Resources

[Infoway Message Builder](#) allows developers to focus on their business problem by providing APIs that fosters quick and easy creation, population and access to HL7v3 requests and responses.

Developers of clients for the PRS HL7 Interface can use [Message Builder API](#) which fosters quick and easy creation, population, validation, and access to HL7v3 requests and responses that are conformed to the jurisdictional specification. Further details can be found in the Message Builder section on InfoCentral (https://infocentral.infoway-inforoute.ca/3_Tools_and_solutions/Message_Builder).

For further technical support please contact project teams listed in the header section or seek support through the community site.
