2. Versioning of the PrescriberT package was implemented with this release. The current version of the PrescriberT subset package was identified as LPR2. That was converted to version 2.0.0. Version 2.0.0 was replaced with the patch release, version 2.0.1. See figure 2.

3. Changes were made to the IG Pack:

- The FHIR artifacts may now contain additional description(s) in designation field(s) associated to the concepts.
- The native artifacts come now in a consolidated format, you can find them in the data/consolidated directory – this format should be identical to what you get when downloading individual subset versions manually.
- Versioning has been added, the IG Pack will be identified as “validator-infowayvocab-2.0.1.pack”.
