Primary Health Care Subsets

Current Release	
Access	Terminology Gateway
Release Type	Maintenance

Changes included in this release may include:

- Requests to add, change or inactivate content in both English and French
- Corrections to content (typographical errors, metadata updates etc.)

Click here to review more general information about subset releases.

Change logs that are specific to each subset can be found on the Terminology Gateway.

Primary Health Care General Notes

In order to facilitate standardization of data at the Primary Healthcare (PHC) point of service, as well as interoperability and health system use, the Canadian Institute for Health Information (CIHI) in collaboration with jurisdictions and Canada Health Infoway Inc. (Infoway), led the development of the Primary Health Care Electronic Medical Record Content Standard (PHC EMR CS). The PHC EMR CS has since been updated and renamed by CIHI to be the Primary Health Care Electronic Medical Record Minimum Data Set (PHC EMR MDS) for Performance Measurement. To support this MDS, Infoway continues to revise the PHC subsets where appropriate.

More information on the PHC EMR MDS can be found on InfoCentral.
